

Elevate your data team and increase your org's analytical maturity

Hi there,

Feel like your data team is constantly putting out fires instead of driving real value?

Building a successful data team goes beyond just having the right tools or the brightest minds. To effectively support business goals, a data team must have structure, organizational support, a clear tie to business value, and a strong vision set forth by dedicated leadership.

This month, our own data experts share key strategies to elevate your data team and encourage higher adoption of your data products across the organization.

Let's dive in!

Chief Marketing Officer, Analytics8

4 Qualities of an Effective Data Team

1. Led By Someone Who Translates Technical Work into Business Value

Every data team needs a single leader to take ownership of the team's output

and success — someone with high technical proficiency who can effectively lead the team and translate their work into business value. This ensures that the technical work being done directly supports business goals and drives organizational success.

2. Data Quality is a Non-Negotiable

If you want stakeholders to adopt what your data team creates, you must build trust in the data. Assess data governance policies, quality, and integrity. For the data team — data accuracy, completeness, and consistency should be paramount.

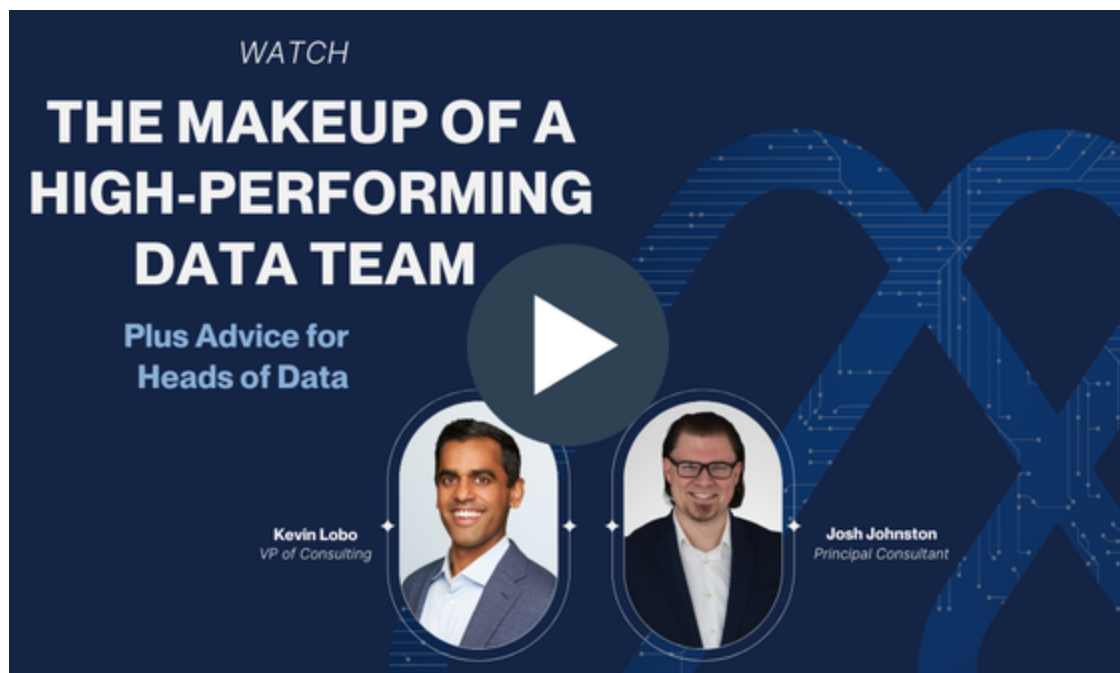

3. Established Communication Channels Between the Business and Data Teams

Open communication between the data team and decision-makers ensures continuous alignment and investment in data projects. Define methods for stakeholders and data consumers to request, track, and understand ongoing work.

4. Versatile Skillset and Clearly Defined Roles

A data team should represent versatile skill sets that address the entire data lifecycle. Your staffing plan should detail the purpose and job activities of each role, and each individual needs a solid understanding of how they support organizational objectives. Data teams are more effective when functions are clear and they know what success looks like.
