

Fix your data workflows before it hurts your bottom line

Hey boss!

You know all that **stuff** happening behind the scenes so you can get those data dashboards? Data extraction, cleaning, transformation, loading, validation, storing — there's a lot going on!

It's easy to ignore all of that as long as the reports keep coming.

But the truth is, if you're encountering bottlenecks, clogged systems, or slow processes, it's holding your business back.

Inefficient workflows (a.k.a. poor data plumbing 🛠️) are costing you time, money, and insights — issues we've seen with many clients as their data needs evolve.

This month, we're diving into a recent example where Databricks helped clear up workflow inefficiencies and unlock valuable business insights.

Let's dive in!

From Disjointed Data to Unified Insights A Success Story ...

When we started working with CareQuest Institute for Oral Health they had recently separated from an affiliate and needed a robust tech foundation to manage structured and unstructured data from 20+ sources.

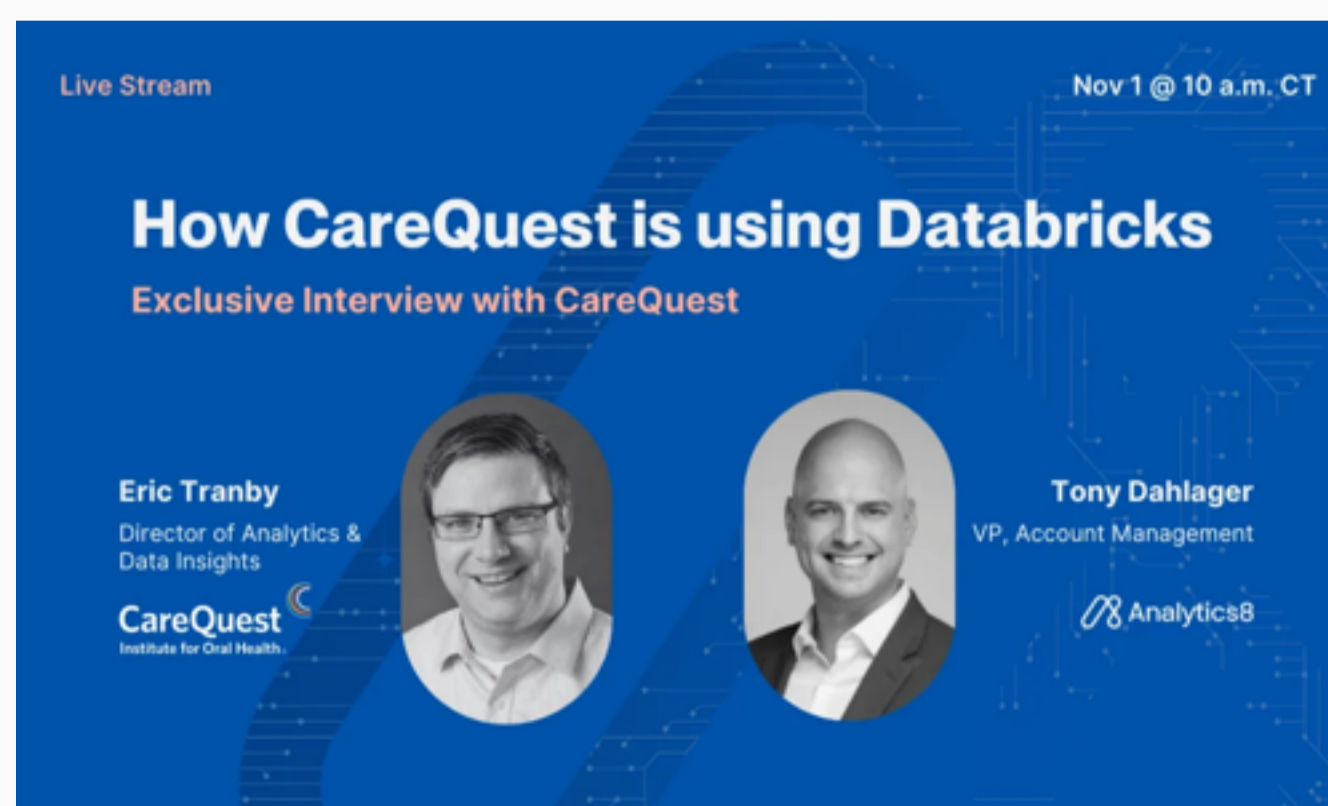

The Databricks Data Intelligence Platform was the MVP 🏆 in helping CareQuest handle their complex datasets. Here's how they made the tool work for them:

- ✅ They automated continuous data ingestion into Databricks Delta Tables, creating a cohesive dimensional model for efficient reporting and analysis
- ✅ They utilized Databricks' Notebook orchestration and a CI/CD pipeline to facilitate collaborative data analysis, streamline data workflows, and automate data engineering tasks
- ✅ They accelerated advanced analytics capabilities by enabling analysts to work in R — ensuring everyone worked from the same governed data assets within Databricks

The result: CareQuest has a *streamlined, secure data infrastructure* that advances their mission to improve oral health for underserved communities.

Join us! Exclusive Interview with Eric Tranby, Director of Analytics & Data Insights, CareQuest Institute of Oral Health

Nov 1 at 10 am CT

Join us as we chat with Eric Tranby to discuss more about why Databricks was chosen, features they use, and business value it has unlocked for them.

Leave the session with inspiration on how to utilize Databricks at your organization!
